

'It is important to emphasize that behaviorally informed policies go far beyond nudges. For example, behavioral scientists have found that many people suffer from unrealistic optimism and also from *present bias*...In terms of public policy, the use of behavioral insights is now established – but it remains in its early stages. The next generation will be critical. This extraordinary textbook will equip its users to help.'

– Cass Sunstein, Robert Walmsley University Professor, Harvard University, US

The first decades of the twenty-first century have offered a remarkable shift in how policies are made as well as who designs them. Until this period, local, regional, and national policy advisors largely comprised economists, lawyers, and financial experts. But in an era when behavioral scientists are increasingly being asked to demonstrate the impact of their research, many are playing a much greater role in policymaking across a range of sectors as a result.

Written by a team of authors working across both academia and government, *Behavioral Insights for Public Policy* is the first textbook to fully examine how psychology can be applied to a range of public policy areas. It addresses a wide variety of topics from the origins of policy as well as major findings from behavioral economics and nudge theory, to large-scale applications of behavioral insights. The compilation is the first of its kind to broadly cover the underlying theory, history, major empirical examples, and practical applications to policy of nudges (or behavioral insights) for teaching and study in higher education. Featuring over 100 empirical examples of how behavioral insights are being used to address some of the most critical challenges faced globally, the book also includes a unique chapter from an organization actively implementing behavioral insights in policies along with various government institutions.

Also featuring case studies looking at key policy issues, learning outcomes, a glossary of key terms, and an accompanying website, this important book will be essential reading for any student of applied psychology. It has also been produced for others interested in the topic from social, political, and economic sciences, as well as those in government looking for an overview of the key issues.

KAI RUGGERI is the founding director of the Policy Research Group in the Department of Psychology at the University of Cambridge, UK, and Assistant Professor in Health Policy and Management at the Mailman School of Public Health, Columbia University, US. He holds a BA and PhD in psychology, and has a global portfolio of teaching and research in behavior, economics, and policy. He is a Fellow of Corpus Christi College and of the Royal Society of Arts.

CHAPTER 1	Psychology and policy	1
CHAPTER 2	Evidence-based policy	17
CHAPTER 3	Policy evaluation	41
CHAPTER 4	The science of behavior and decision-making	59
CHAPTER 5	Economic, financial, and consumer	80
CHAPTER 6	Health and healthcare	94
CHAPTER 7	Energy and environment	114
CHAPTER 8	Education	131
CHAPTER 9	Work and workplace	156
CHAPTER 10	Communication and public engagement	174
CHAPTER 11	An organizational approach to applying behavioral insights to policy: Center for Applied Behavioral Science at MDRC	200

CHAPTER 12 What is impact? 218

Appendix A: Glossary	237
Appendix B: Case examples	255
References	272
Index	317

Figures

1.1	The Parks Framework for predicting public responses to policies in the context of social dilemma	11
1.2	Classification of policy tools	13
2.1	A conceptualization of four features of policy: evidence, ideology, proactivity, treatment	24
2.2	Nuanced visualization of The Rose Hypothesis	28
2.3	Strengths and weaknesses of Rose's two policy approaches	29
2.4	A pragmatic model for the development and evaluation of policies	32
2.5	Forms of evidence used in policies	35
3.1	A pragmatic framework for evaluation and monitoring	46
3.2	Index for Evidence in Policy (INDEP)	52
3.3	A generic policy scoring system	55
3.4	Valuation of a policy	57
4.1	Understanding economic theory through supply and demand	63
4.2	Prospect Theory	66
4.3	Are we still in the Wild West of behavioral insights?	71
5.1	Reducing complexity by reframing financial risk	84
5.2	Introducing a charge for plastic bags	85
5.3	Tax letters in the UK	87
5.4	Heuristics and price drops	91
6.1	Approaches to policies across populations	97
6.2	Catheter-related bloodstream infection rates	103
6.3	Different options for nudging healthier behaviors	104
6.4	Using defaults to increase vaccination rates	105
6.5	A conceptualization of opportunities for behavioral insights in health and healthcare	110
7.1	Social comparison messages to save water	118
7.2	The boomerang effect and its potential drawback for energy usage	119
7.3	Injunctive social norms counter the boomerang effect	120
7.4	Intrinsic and extrinsic motivation to enroll in energy-saving program	122
7.5	The effect of labelling types	125
7.6	Encouraging change with defaults to green options	127
8.1	College enrollment rates among low-income students	136
8.2	The impact of partnering on reducing dropout rates	138
8.3	Fixed and growth mindsets as proposed by Carol Dweck (2006)	140
8.4	Gender stereotypes and test results	143
8.5	Impact of removing racial stereotype threats on test grades	144
9.1	Behavioral insights support the unemployed to find work	159
9.2	The relationship between productivity and control	164
